

Burrito

Sedum burrito

- **Vigorous trailing variety** that can grow stems up to 3' long covered with bean-like leaves
- **Naturally occurring species** from Mexico, well-loved in cultivation but, as yet, undiscovered in the wild
- **Quick to propagate** from stem cuttings or leaves (an advantage, since its leaves fall off easily)
- **Tolerates drought**, full sun, and neglect, needing only great drainage and protection from frost

Zone: 10 (30°F)

Orange Delight

Sedum nussbaumerianum

- **Sun-loving stemmed rosette** with chunky leaves and a robust growth habit
- **Vibrant tones of lime, yellow, and orange** with the brightest colors resulting from drought and direct sun
- **Blooms each summer** with clusters of white, star-shaped flowers with a light fragrance
- **Freely branching form** that can cascade from containers and easily re-roots from stem cuttings

Zone: 10 (30°F)

The Ultimate Succulent Club™

Jet Beads

Sedeveria

- **Distinctively shaped succulent** with short stems covered by chunky, teardrop leaves
- **Dark coloration of green and burgundy** that deepens to near black in full sun and drought
- **Contrasts well with most succulents** in arrangements, both due to its unique form and coloration
- **Easy to propagate** from stem cuttings or fallen leaves by planting into damp, gritty soil

Zone: 10 (30°F)

The Ultimate Succulent Club™

Mini Me

Sedum rubrotinctum

- **Dwarf Jelly Bean variety** with tiny, round leaves lining its short stems
- **Red to copper flushes** on leaf tips with exposure to direct sun
- **Charming, slow grower** stays small in pots or spreads as a ground cover outdoors in frost-free climates
- **Easy to propagate** from stem cuttings or leaves when transplanted into pots with drainage holes and gritty soil

Zone: 10 (30°F)

The Ultimate Succulent Club™

Blue Burrito

Sedeveria

- **Large, robust grower** with long stems and a full covering of slender, pointed leaves
- **Icy, silver color** can transition to more blue or pink tones, depending on how much sunlight it gets
- **Great for arrangements** thanks to its large size and trailing habit, which adds levels to a planting
- **Easy to re-root and propagate** from stem cuttings and mature leaves; perfect for sharing!

Zone: 10 (30°F)

The Ultimate Succulent Club™

California Sunset

Graptosedum

- **Range of pink, orange, and purple tones**, with deeper colors when stressed by sun, drought, or cool temperatures
- **Intrageneric hybrid of Ghost Plant** (*Graptopetalum paraguayense*) and *Sedum adolphii*
- **Fast, forgiving grower** when given great drainage; can spill from containers for a bountiful, sprawling effect
- **Easy to prune and propagate** from stem cuttings or mature leaves to maintain a more compact look

Zone: 10 (30°F)

The Ultimate Succulent Club™

Pink Granite

Sedeveria

- **Soft pink leaves** and a pastel green center, with the brightest hues when grown in full sun
- **Stemmed grower** that can reach 6.0" tall and gently spill from containers
- **Grows offsets at base** and readily re-roots from stem cuttings
- **Easy to grow in pots** with drainage holes and gritty soil; protect from frost and water deeply when soil is completely dry

Zone: 10 (30°F)

Frank Venz

Pachysedum

- **Long, faceted leaves** sprout upwards from tall stems and give a crystalline look
- **Orange highlights** in response to full sun accent the verdant green base coloration
- **Tall "thriller"** in container arrangements that combines well with shorter and trailing plants
- **Sun lover** that only needs occasional water when soil is completely dry and leaves feel less firm

Zone: 10 (30°F)

The Ultimate Succulent Club™

Blue Jelly Bean

Sedum pachyphyllum

- **Chunky, finger-like leaves** sprout upwards from tall stems that can reach 12.0" tall or be pruned short
- **Blue-green tones** are the norm, but a rosy blush appears at the leaf tips when grown in full sun
- **Cheery yellow blooms** appear clustered on tall flower stalks in spring and summer
- **Low maintenance plant** that can go long stretches without water and thrives in well-draining pots and soil

Zone: 10 (30°F)

The Ultimate Succulent Club™

Salsa

Sedum

- **Spunky plant with jellybean-like leaves** that curve upward and show light facets
- **Bright red leaf tips** accent the minty green foliage and deepen with full sun and drought
- **Tall, branching stems** up to 8" long can bend and spill out of containers
- **Tolerates long droughts** and rocky soil because its chunky leaves can store lots of water

Zone: 10 (30°F)

Golden Glow

Sedum x adolphii

- **Vibrant succulent** that shifts between yellow, orange, and near red tones depending on its sun exposure
- **Long, slender leaves** come to a sharp point and show distinct color outlines at their margins
- **Strong grower** that spreads well outdoors in frost-free weather and thrive indoors on a sunny sill
- **Easy to propagate** and re-root from stem cuttings and mature leaves

Zone: 10 (30°F)
