

Jelly Bean

Sedum rubrotinctum

- **Fun, stemmed succulent** covered with tiny, bead-like leaves that flush red in direct sun
- **Chunky, bean-shaped leaves** spiral up stems that can grow about 6.0" tall
- **Fast, easy grower** when given lots of sunshine and deep (but infrequent) water
- **Leaves fall off easily** but can readily take root; quick to propagate from stem cuttings

Zone: 10 (30°F)

S. clavatum

Sedum clavatum

- **Sweet, pastel rosette** that can grow robust stems up to 8.0" long, which sprawl and spill out of pots
- **Blue-green color shifts to pink** with increased light and a thick coating of farina gives a matte, powdery finish
- **Naturally occurring species** native to the andesite cliffsides of Mexico's Tiscalatengo River
- **A striking feature in hanging baskets**, particularly when gently stressed by direct sun and drought

Zone: 10 (30°F)

Lola

Echeveria

- **Classic beauty** that's been popular for decades for its pearlescent coloration and vigor
- **Sun loving plant** that thrives in full sun on a south facing window sill or outdoors in frost-free weather
- **Powdery coating of farina** protects the leaves in full sun and gives them a matte finish
- **Tolerates neglect well** and can easily go weeks without water; drench deeply when soil is completely dry and leaves feel less turgid

Zone: 10 (30°F)

The Ultimate Succulent Club™

Little Warty

Gasteria

- **Outstanding indoor plant** that thrives with less sunlight and water than most succulents can tolerate
- **Tongue-shaped leaves** are striped with light green and textured with lots of tiny bumps
- **Forgiving grower** that tolerates neglect, drought, low light, full sun, small pots, and black thumbs
- **Sprouts a tall bloom stalk** from which hang numerous coral, tubular flowers that delight hummingbirds

Zone: 10 (30°F)

H. retusa f. geraldii

Haworthia retusa f. geraldii

- **Recurved leaves bend back** to expose translucent, triangular leaf tips to as much sun as possible
- **Bronze to yellow tones** expressed when the plant is stressed by drought and direct sun
- **Prolific offsets** form around each plant's base; grows into a dense, mounded cluster
- **Easy to grow indoors** and thrives with deep watering when the soil is completely dry

Zone: 10 (30°F)

Air Plant

Tillandsia ionantha 'Fuego'

- **Tropical epiphyte** that grows anchored to jungle trees instead of out of the ground
- **Thrives in high humidity** or with regular dunkings or weekly, one hour water baths
- **Easy houseplant** that can be displayed in most bright rooms on non-porous surfaces like stones, glass, or shells
- **Blooms once** at the end of its life then produces clusters of new offsets at its base

Zone: 10 (30°F)
