

Cebenese

Sempervivum arachnoideum

- **Natural webbing** of thick, white cilia covers the rosette like a cobweb and protects it in sunny, arid conditions
- **One of the most prolific varieties** with piles of new offsets developing into massive, mounded clumps
- **Thrives outdoors** in rocky crevices, squeezed into retaining walls, clustered around stepping stones, and scattered around a green roof
- **Grows well in rocky soil** and requires excellent drainage, particularly in winter

Zone: 5 (-20°F)

The Ultimate Succulent Club™

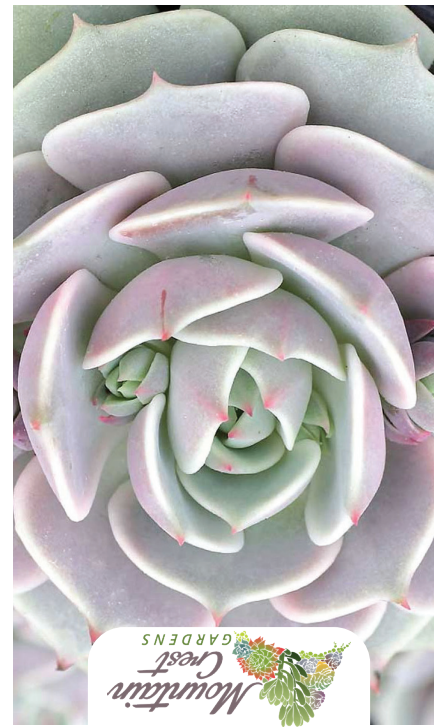

S. clavatum

Sedum clavatum

- **Sweet, pastel rosette** that can grow robust stems up to 8.0" long, which sprawl and spill out of pots
- **Blue-green color** shifts to pink with increased light and a thick coating of farina gives a matte, powdery finish
- **Naturally occurring species** native to the andesite cliffsides of Mexico's Tiscalatengo River
- **A striking feature** in hanging baskets, particularly when gently stressed by direct sun and drought

Zone: 10 (30°F)

The Ultimate Succulent Club™

Lola

Echeveria

- **Classic beauty** that's been popular for decades for its pearlescent coloration and vigor
- **Sun loving plant** that thrives in full sun on a south facing window sill or outdoors in frost-free weather
- **Powdery coating** of farina protects the leaves in full sun and gives them a matte finish
- **Tolerates neglect well** and can easily go weeks without water

Zone: 10 (30°F)

The Ultimate Succulent Club™

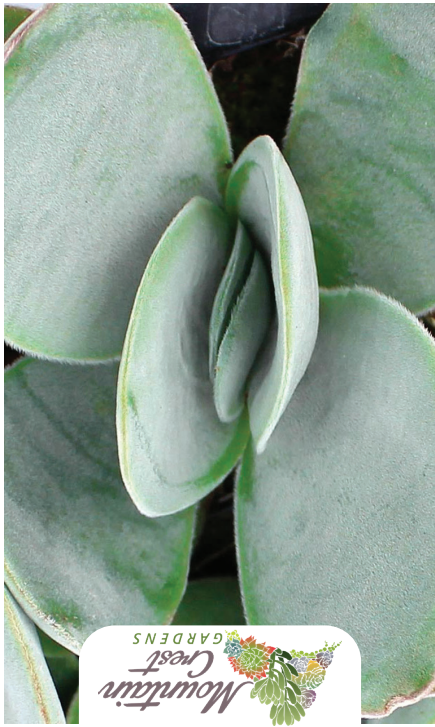

A Grim One

Graptopoveria

- **Chunky, upright leaves** store lots of water and enable this plant to survive long, hot droughts
- **Icy blue colors** blush pink at the leaf tips when grown in full sun exposure
- **Cheery yellow flowers** bloom on tall bloom stalks and are speckled with tiny red dots
- **Easy to propagate** from mature, healthy leaves to grow your collection and share the love

Zone: 10 (30°F)

The Ultimate Succulent Club™

C. obvallata
Crassula obvallata

- **Soft, velvety plant** with fanned out leaves shaped like flat discs
- **Slow grower** with branching stems that can develop into low clusters
- **Silvery green leaves** packed with chlorophyll help this succulent tolerate indoor growing, but keep it at least somewhat close to a window
- **Can bloom in spring** with clusters of tiny, pale-yellow blossoms on tall bloom stalks

Zone: 10 (30°F)
