

Ivory Towers

Crassula x perforata

- **Resilient, stemmed succulent** with stacks of leaves skewered on narrow stems up to 18" long
- **Pistachio green foliage** has a natural, powdery coating and gets a red outline when grown in bright sun
- **Forgiving plant** that grows quickly in pots and has thick enough leaves to tolerate extended drought
- **Easy to propagate** from stem cuttings and eventually bends and sprawls from containers

Zone: 10 (30°F)

String of Buttons

Crassula perforata

- **Classic stemmed succulent** with stacks of flat, triangular leaves skewered on slender stems
- **Green foliage** can tolerate slightly lower light than brightly colored varieties; leaves have a fringe of white cilia
- **Can reach a foot tall** and is great for adding height to arrangements
- **Branches as it grows** and can form wide, sprawling masses; propagate from stem cuttings

Zone: 10 (30°F)

Variegated Buttons

Crassula perforata f. variegata

- **Variegated stemmed succulent** with stacks of flat, triangular leaves skewered on slender stems
- **Light green stripes** and hot pink margins highlight the foliage; more sun bring out brighter pinks
- **Can reach a foot tall** and is great for adding height to arrangements
- **Branches as it grows** and can form wide, sprawling masses; propagate from stem cuttings

Zone: 10 (30°F)

Tom Thumb

Crassula rupestris ssp. commutata

- **Mini stemmed succulent** with lots of tiny, chunky leaves stacked up on thin, woody stems
- **Wedge-shaped leaves** have a pistachio green base tone and get a bright red outline when grown in bright sun
- **Grows shrubby** with lots of sprawling, branching stems that can fill in a pot nicely
- **Drought superstar** that needs well-draining soil and deep, but infrequent water

Zone: 10 (30°F)

Buddha's Temple

Crassula

- Rare collector's variety that slowly grows into a living optical illusion of stacked leaves
- **Green, lightly felted leaves** stack up so tightly they give this unique succulent a pagoda-like form
- **New offsets sprout** from within the main stem, leading to a clustered look
- **Needs very gritty soil** and very infrequent water to avoid rot; can be a fussy grower

Zone: 10 (30°F)

High Voltage

Crassula rupestris

- **Electric highlights of fire engine red** outline its minty green, triangular leaves; give direct sun for the best colors
- **Tall, narrow stems** can bend out of containers, eventually reaching up to 12" long
- **Clusters of tiny, white to pink blossoms** emerge in spring and attract pollinators
- **Roots easily from stem cuttings** when planted in gritty soil and grown near a sunny window

Zone: 10 (30°F)
